

Order Management System (OMS)

User Guide & Execution Instructions

1. Project Overview

This project is a Web-Based Order Management System developed to manage orders, inventory, invoices, and payments efficiently.

2. Folder Structure

```
OMS_Project/  
|  
├── frontend/      (Angular Build)  
├── backend/       (Spring Boot JAR)  
├── supported-documents/  
└── README.html
```

3. System Requirements

- Java 17 or above installed
- Node.js (optional for frontend server)
- Modern browser (Chrome recommended)

4. Backend Setup (Spring Boot)

Steps to run backend:

```
cd backend  
java -jar OMS_backend-0.0.1-SNAPSHOT.jar
```

Backend will start at:

<http://localhost:8080>

5. Environment Variables Setup (Backend)

Before running the backend, you must configure the required environment variables. These variables are used for database connection, authentication, and email services.

```
DB_URL=your_database_url
DB_USER=your_database_username
DB_PASS=your_database_password
JWT_SECRET=your_jwt_secret_key
MAIL_USERNAME=your_email_address
MAIL_PASSWORD=your_email_password
```

How to Set Environment Variables

For Windows (Command Prompt):

```
set DB_URL=your_value
set DB_USER=your_value
set DB_PASS=your_value
set JWT_SECRET=your_value
set MAIL_USERNAME=your_value
set MAIL_PASSWORD=your_value
```

For Windows (PowerShell):

```
$env:DB_URL="your_value"
$env:DB_USER="your_value"
$env:DB_PASS="your_value"
$env:JWT_SECRET="your_value"
$env:MAIL_USERNAME="your_value"
$env:MAIL_PASSWORD="your_value"
```

For Linux / Mac:

```
export DB_URL=your_value
export DB_USER=your_value
export DB_PASS=your_value
export JWT_SECRET=your_value
export MAIL_USERNAME=your_value
export MAIL_PASSWORD=your_value
```

Note: Ensure all environment variables are properly set before starting the backend. Missing variables may prevent the application from running.

5. Frontend Setup (Angular Build)

Option 1 (Recommended):

```
npm install -g serve  
serve frontend
```

Then open:

`http://localhost:4200`

Option 2:

Open **index.html** directly in browser

6. Important Notes

- Start backend before frontend
- Ensure API URLs are correctly configured
- Database should be pre-configured

7. Sample Login Credentials

Admin User:

Role: ADMINISTRATOR

Email: admin@gmail.com

Password: admin123

8. Conclusion

This system helps automate order processing, improve accuracy, and enhance business efficiency.
