chase_Order_Item

chase_order_item_id (PK)

- purchase_order_id (FK to Purchase_Order table)
- product_id (FK to Product table)
- quantity
- unit_price

7. Invoice

- invoice_id (PK)
- sales_order_id (FK to Sales_Order table)
- invoice_date
- total_amount
- status

8. Payment

- payment_id (PK)
- invoice_id (FK to Invoice table)
- payment_date
- amount
- payment_method

9. Customer

- customer_id (PK)
- customer_name
- email
- phone
- address

10. Supplier

- supplier_id (PK)
- supplier_name
- email
- phone
- address

11. User

- user_id (PK)
- username
- password
- email
- role

Views:

1. Sales_Order_Details

- Joins the Sales_Order, Sales_Order_Item, and Product tables
- Retrieves the sales order details including order information, customer details, and ordered products

2. Purchase_Order_Details

- Joins the Purchase_Order, Purchase_Order_Item, and Product tables
- Retrieves the purchase order details including order information, supplier details, and ordered products

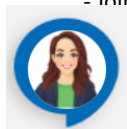

3. Product_Inventory

- Joins the Product and Product_BOM tables
- Retrieves the product inventory levels and bill of materials information

4. Invoice_Payment_Status

- Joins the Invoice and Payment tables
- Retrieves the invoice and payment status for each sales order

Need help?

IT Procedures:

1. Create_Sales_Order

- Accepts parameters for customer details and ordered products
- Inserts records into the Sales_Order and Sales_Order_Item tables
- Updates the product inventory in the Product table

2. Generate_BOM

- Accepts a product ID as a parameter
- Retrieves the bill of materials for the specified product from the Product_BOM table
- Returns the component details and quantities

3. Create_Purchase_Order

- Accepts parameters for supplier details and ordered products
- Inserts records into the Purchase_Order and Purchase_Order_Item tables
- Updates the product inventory in the Product table

4. Generate_Invoice

- Accepts a sales order ID as a parameter
- Retrieves the sales order details and generates an invoice record in the Invoice table
- Updates the sales order status to "Invoiced"

5. Record_Payment

- Accepts parameters for invoice ID, payment amount, and payment method
- Inserts a payment record into the Payment table
- Updates the invoice status to "Paid" if the payment amount matches the invoice total

6. Generate_Reports

- Accepts parameters for report type and date range
- Retrieves data from the relevant tables and views based on the report type
- Generates reports on sales orders, purchase orders, invoices, payments, and inventory levels

7. Manage_Users

- Accepts parameters for user details (username, password, email, role)
- Performs CRUD operations on the User table
- Handles user authentication and authorization based on user roles

These tables, views, and stored procedures form the backend database and business logic for the Order Management System. The tables stor

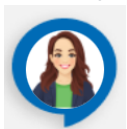

The stored procedures handle the data insertion, updates, and retrieval based on the specific requirements of each user story. They ensure d.

The backend database and business logic work together to support the functionality required by the Epics and User Stories, enabling the effic
